THE UNITED STATES OF AMERICA

TO ALL TO WHOM THESE PRESENTS SHALL COME:

Curran L. Garrett

Whereas, THERE HAS BEEN PRESENTED TO THE

Secretary of Agriculture

AN APPLICATION REQUESTING A CERTIFICATE OF PROTECTION FOR AN ALLEGED NOVEL VARIETY OF SEXUALLY REPRODUCED PLANT, THE NAME AND DESCRIPTION OF WHICH ARE CONTAINED IN THE APPLICATION AND EXHIBITS, A COPY OF WHICH IS HEREUNTO ANNEXED AND MADE A PART HEREOF, AND THE VARIOUS REQUIREMENTS OF LAW IN SUCH CASES MADE AND PROVIDED HAVE BEEN COMPLIED WITH, AND THE TITLE THERETO IS, FROM THE RECORDS OF THE PLANT VARIETY PROTECTION OFFICE, IN THE APPLICANT(S) INDICATED IN THE SAID COPY, AND WHEREAS, UPON DUE EXAMINATION MADE, THE SAID APPLICANT(S) IS (ARE) ADJUDGED TO BE ENTITLED TO A CERTIFICATE OF PLANT VARIETY PROTECTION UNDER THE LAW.

NOW, THEREFORE, THIS CERTIFICATE OF PLANT VARIETY PROTECTION IS TO GRANT UNTO THE SAID APPLICANT(S) AND THE SUCCESSORS, HEIRS OR ASSIGNS OF THE SAID APPLICANT(S) FOR THE TERM OF *seventeen* YEARS FROM THE DATE OF THIS GRANT, SUBJECT TO THE PAYMENT OF THE REQUIRED FEES AND PERIODIC REPLENISHMENT OF VIABLE BASIC SEED OF THE VARIETY IN A PUBLIC REPOSITORY AS PROVIDED BY LAW, THE RIGHT TO EXCLUDE OTHERS FROM SELLING THE VARIETY, OR OFFERING IT FOR SALE, OR REPRODUCING IT, OR IMPORTING IT, OR EXPORTING IT, OR USING IT IN PRODUCING A HYBRID OR DIFFERENT VARIETY THEREFROM, TO THE EXTENT PROVIDED BY THE PLANT VARIETY PROTECTION ACT (PLANT VARIETY PROTECTION ACT, 7 U.S.C. 2321 ET SEQ.)

ST. AUGUSTINE GRASS

'Christi'

In Testimony Whereof, I have hereunto set my hand and caused the seal of the Plant Variety Protection Office to be affixed at the City of Washington this 26th day of February in the year of our Lord one thousand nine hundred and eighty.

Attest:

Lyman H. Lee
Commissioner
Plant Variety Protection Office
Grain Division
Agricultural Marketing Service

Henry D. ...
Secretary of Agriculture

APPLICATION FOR PLANT VARIETY PROTECTION CERTIFICATE

INSTRUCTIONS: See Reverse.

as per letter

13. CHECK BOX BELOW FOR EACH ATTACHMENT SUBMITTED:

- ☒ 13A. Exhibit A, Origin and Breeding History of the Variety (See Section 52 of the Plant Variety Protection Act.)
☒ 13B. Exhibit B, Novelty Statement.
☒ 13C. Exhibit C, Objective Description of the Variety (Request form from Plant Variety Protection Office.)
☒ 13D. Exhibit D, Additional Description of the Variety.

14A. Does the applicant(s) specify that seed of this variety be sold by variety name only as a class of certified seed?
(See Section 83(a). (If "Yes," answer 14B and 14C below.) ☐ YES ☒ NO

14B. Does the applicant(s) specify that this variety be limited as to number of generations?

☐ YES☐ NO

14C. If "Yes," to 14B, how many generations of production beyond breeder seed?

☐ FOUNDATION☐ REGISTERED☐ CERTIFIED

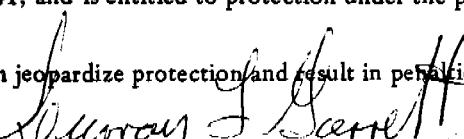

15. Does the applicant(s) agree to the publication of his/her (their) name(s) and address in the Official Journal?

☒ YES☐ NO

16. The applicant(s) declare(s) that a viable sample of basic seed of this variety will be deposited upon request before issuance of a certificate and will be replenished periodically in accordance with such regulations as may be applicable.

The undersigned applicant(s) is (are) the owner(s) of this sexually reproduced novel plant variety, and believe(s) that the variety is distinct, uniform, and stable as required in Section 41, and is entitled to protection under the provisions of Section 42 of the Plant Variety Act.

Applicant(s) is (are) informed that false representation herein can jeopardize protection and result in penalties.

(SIGNATURE OF APPLICANT)

INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$250.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, National Agricultural Library, Beltsville, Maryland 20705. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Give the date the applicant determined that he had a new variety based on (1) the definition in Section 41(a) of the Act and (2) the date a decision was made to increase the seed.
- 13a Give (1), the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. (2), the details of subsequent stages of selection and multiplication. (3), the type and frequency of variants during reproduction and multiplication and state how these variants may be identified and (4), evidence of stability.
- 13b Give a summary statement of the variety's novelty. Clearly state how this novel variety may be distinguished from all other varieties in the same crop. If the new variety most closely resembles one or a group of related varieties; (1) identify these varieties and state all differences objectively; (2) Attach statistical data for characters expressed numerically and demonstrate that these differences are significant; and (3) submit, if helpful, seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty.
- 13c Fill in the Exhibit C, Objective Description form for all characteristics, for which you have adequate data.
- 13d Describe any additional characteristics that are not described, or whose description cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the description of characteristics that are difficult to describe; such as; plant habit, plant color, disease resistance, etc.
- 14A If "YES" is specified (seed of this variety be sold by variety name only as a class of certified seed) the applicant may NOT reverse his affirmative decision after the variety has either been sold and so labeled or published or the certificate has been issued. However, if the applicant specifies "NO", he may change his choice. (See Section 180.15 of the Regulations and Rules of Practice.)

EXHIBIT "A"
Rewrite September 25, 1979

1. The St. Augustine seed which is the subject matter of this application results from the open pollination of St. Augustine Grass described in United States Plant Patent No. 3834 issued on March 2, 1976. The grass from which the seed was produced was discovered in Corpus Christi, Texas. Cuttings from this discovered grass were planted and it was subsequently discovered on November 3, 1969 that a significantly high percentage of seed germinated.
2. In June, 1975, a six acre plot was planted with the grass described and claimed in United States plant patent No. 3834. A harvest of the seed thereby produced was made in June, 1976 and this harvest indicated an approximate yield of 225 pounds of seed per acre. (See attached certificates for Additional Data)
3. Tests were run to determine the ability of the seed to produce a St. Augustine grass plant having the desirable and distinct characteristics. Only first generation seed (F-1) will be grown from self pollinated plants vegetatively propagated from plant patent No. 3834. 'Christi' is a stable variety maintaining the same characteristics when grown from different seed lots. 'Christi' is a uniform variety. Variants which occur are: (1) plants with upright growing characteristics with wider longer leaves (less than 2.5%) and (2) varigated plants (less than 1%). Total variants should not exceed 3.5%. These variants however produce desirable and attractive plants which are commercially acceptable.

EXHIBIT B

BOTANICAL DESCRIPTION OF VARIETY

The following is a detailed description of "Christi" St. Augustine Grass Variety, with color terminology in accordance with ISCC-NBS Centroid Color Charts, Except where general color terms of ordinary dictionary significance are obvious.

GROWTH HABIT: Very low-grow stoloniferous; Dwarf; Fast Growing; with little stolon branching prior to 12th to 14th internode.

CULMS: Branching; Slightly compressed.

STOLONS: Small; oval shaped.

INTERNODES: Oval shaped primary stolon internodes at 4th internode 2.4 mm X 1.9 mm in cross section and average 30.4 mm in length; branch stolons at 12th to 14th internode average 1.97 mm X 1.67 mm in cross section and 22.1 mm in length.

COLOR: Dark gray red....Color No. 20

LEAF BLADE: Leaves folded in the bud. Barbed.

LENGTH: Total maximum uncut height 7.5 cm; leaf length at the 4th or 5th internode about 30.5 mm.

WIDTH: 5.3 mm.....10 mm from collar.

COLOR: Medium olive green....color No. 125.

VENATION: Obscure except the midrib which is prominent on the underside.

COLLAR: Continuous; wide at the margins and narrow at the midrib....color white.

EXHIBIT B

LIGULE: A continuous fringe of hairs measuring about 2.0 mm to 3.0 mm long.

AURICLES: Absent but represented by an intermittent fringe of white hair measuring about 0.7 mm long and extending about 1.4 mm down the sheath.

INFLORESCENCE: A moderately fleshy raceme with about 25 embeded spikelets about half of which are fertile.

FLOWERING SHOOTS: About 18 cm long

RACEME: Average length 7.1 cm

SPIKELETS: About 4.0 mm

FIRST GLUME: About 2.81 mm

SECOND GLUME: About 4.19 mm

PALEA: About 3.50 mm

LEMMA: About 4.10 mm

STIGMA: Color white

SEED SIZE: Length 2.0 mm; width about 1.4 mm; thickness about 0.9 mm.

OBJECTIVE DESCRIPTION OF VARIETY
ST. AUGUSTINEGRASS (*Stenotaphrum secundatum*)

Place the appropriate number that describes the varietal character of this variety in the boxes below. Fill unused columns with zeroes (e.g. when number is 99). The value should only be used to indicate that the varieties are equal. The symbol ▲ indicates a decimal point. Characteristics described, including numerical measurements, should represent those which are TYPICAL for the variety. Measured data should be for unclipped spaced plants in plots, or in individual pots if greenhouse-grown. Comparisons to standard varieties must be made under the same conditions. Give location of test area Ingleside, Texas.

1. PLOIDY:
 2n chromosome no. Unknown

2. GROWTH HABIT:

EXHIBIT D

DATA INDICATIVE OF NOVELTY

Novelty is based on a combination of unique characters as shown below;

"Christi" St. Augustine Grass most closely resembles St. Augustine NO. 141 except it differs in that;

- (1) It averages about 4.4 cm shorter
- (2) The flowering shoots are about 10.5 cm shorter
- (3) The stolons branch much less than St. Augustine NO. 141 and do not start jointing until about 12th to 14th internode while the St. Augustine NO. 141 starts jointing at the 5th or 6th internode.
- (4) Both the first and second glumes are much longer

August 23, 1979

Vegetatively Propagated
EXHIBIT B - ~~REVISED~~ 9/13/79

BOTANICAL DESCRIPTION OF VARIETY

The following is a detailed description of "Christi" St. Augustine Grass variety, with color terminology in accordance with ISCC-NBS centroid color charts, except where general color terms of ordinary dictionary significance are obvious.

GROWTH HABIT: Very low-growing; Stoloniferous; Dwarf;
Fast Growing with little stolon branching
prior to 12 to 14 internode.

CULMS: Branching; Slightly compressed.

STOLONS: Small; oval shaped.

INTERNODES: Oval shaped; primary stolon at 4th
internode 2.6 mm X 2.1 mm in cross
section and measure 42 mm in length

COLOR: Dark Gray Red...Color No. 20

LEAF BLADES: Leaves folded in the bud. Barbed.

LENGTH: Total maximum uncut height 8 cm;
leaf length at 5th internode 31.7 mm

WIDTH: 3.5 mm...25 mm from collar

COLOR: Medium olive green..Color No. 125

VENATION: Obscure except the midrib which is
prominent on the underside

COLLAR: Continuous; wide at margins and
narrow at the midrib-color white

LIGULE: A continuous fringe of hairs measuring
.3 mm long

AURICLES: Absent but represented by an intermittent
fringe of white hair measuring 1.0 mm
long and extending 1.1 mm down the sheath.

INFLORESCENCE: A moderately fleshy raceme with 22 embeded
spikelets. Half of which are fertile.

** Floratam produced very few flowering shoots this year.

* This revised data is based on vegetatively propagated cuttings of "Christi" St. Augustine.

EXHIBIT D (REVISED OCTOBER 12, 1979)

Data Indicative of Novelty

Novelty is based on a combination of unique characters as shown below:

1. 'Christi' St. Augustine Grass most closely resembles St. Augustine 141 except it differs in that uncut height is 2.5 cm shorter than 141, 10.5 vs. 8.0 cm.
2. The flowering shoots are 8.0 cm shorter than 141, 26.5 vs. 18.5 cm.
3. The spiklet length is longer by .77 mm, 3.68 cm vs. 4.45 cm.
4. The first glume is longer by .73 mm, 1.625 vs. 2.360 mm, while the second glume is longer by .57 mm, 3.45 vs. 4.02 mm. In addition the palea and lemma are longer by .38 mm, 2.90 vs. 3.28, and .40 mm, 3.60 vs. 4.0 respectively.

NOTE: This data is based on vegetatively propagated cuttings of the same stage of maturity of 'Christi' St. Augustine and 141 St. Augustine planted at the same time and grown outdoors in full sun on the same bench.

AFFIDAVIT

I am the owner of the seed which is the subject of plant variety protection application number 7700112, Christi. The seeded variety covered by this application was not available for sale or distribution prior to October 1, 1976, the date of publication of a classified advertisement placed in The Southern Florist and Nurseryman Magazine.
